

Shopware 6 – Bug Report

Bug ID	BUG-001
Title	Inconsistent language displayed in the checkout flow
Environment	Shopware 6 Demo Storefront Browser: Google Chrome / Chromium Checkout: Guest Checkout
Severity	Low
Priority	Medium

Preconditions

The Shopware storefront is opened with the German storefront interface. The customer is not logged in and has a product in the shopping cart.

Steps to Reproduce

1. Open the Shopware 6 demo storefront.
2. Navigate to the Clothing category.
3. Open the 'Westin Test 12cm' product.
4. Add the product to the shopping cart.
5. Proceed to guest checkout.
6. Enter valid customer and shipping information.
7. Continue to the payment section.

Expected Result

The checkout interface should use one consistent language. When the storefront is presented in German, checkout labels and payment method names should also be displayed in German.

Actual Result

The checkout interface contains a mixture of German and English text. For example, German checkout labels are displayed together with the English payment method name 'Cash on delivery'.

Impact

The issue does not prevent the customer from completing the checkout, but it creates an inconsistent localization experience and may reduce clarity for customers using the German storefront.

Severity Justification

Severity is classified as Low because the checkout functionality remains usable and the order can still be completed. However, the inconsistent localization should be corrected to provide a consistent user experience.

Note: The issue was observed during manual guest checkout testing.
